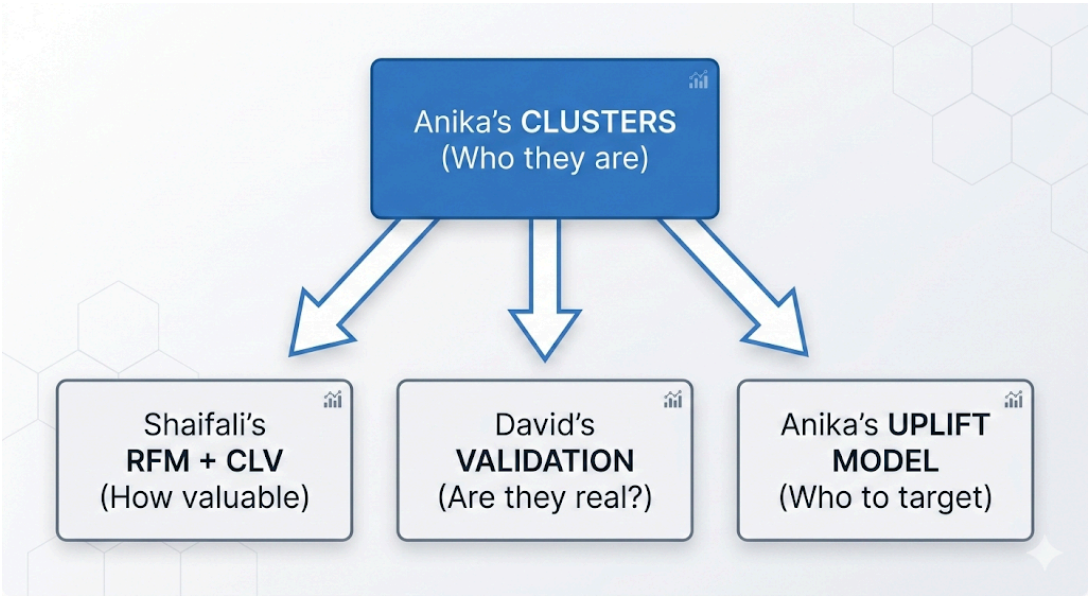
Connecting All Three Contributions

The Complete Picture: How Shaifali's, David's & Anika's models Fit Together

The Three Lenses:

Team Member	Focus	Key Output	Business Question Answered
Anika	Demographics + Behavior	4 Personas + Uplift Scores	Who are our customers? Who should we target?
Shaifali	RFM + CLV	Value Tiers + Revenue at Risk	Which customers are most valuable?
David	Statistical Validation + Campaign Analysis	Cluster Significance + Response Rates	Are segments real? Do they convert?

How They Connect:



Unified Customer View:

By combining all three, we get a 360-degree customer profile:

Anika’a Cluster	Shaifali's RFM	David's Validation	Uplift Score	Recommended Action
0: Affluent Traditionalists	High CLV	✓ Statistically significant	High	Target with premium catalog offers
1: Budget Parents	Low CLV	✓ Significant	Medium	Test small digital deals
2: Established Families	Medium CLV	✓ Significant	Highest	PRIORITY – Most responsive to campaigns
3: Emerging Singles	Low CLV	✓ Significant	Low	Suppress from campaigns

Advantages of Integration:

Advantage	How It Helps
Validation	David's significance tests confirm your clusters aren't random
Prioritization	Shaifali's CLV tiers tell you which clusters are worth investing in
Precision	Your uplift model tells you exactly who to target within each cluster
Efficiency	Combine all three = target the right person, with the right offer, at the right time

The Unified Recommendation Engine:

Segment	Target?	Channel	Offer Type	Expected Uplift
Cluster 0 + High CLV	+	Catalog + Store	Premium wine/meat	+25%
Cluster 1 + Low CLV	< Test >	Web only	Family bundles	+8%
Cluster 2 + Medium CLV	++ PRIORITY	All channels	Cross-sell	+32%
Cluster 3 + Low CLV	X Suppress	None	None	-
